## Learning Objective:

With over 8 billion people on this planet, youth have the ability to recreate the way the next generation of cities will be built. With 42% of the world's population being under the age of 24, youth can reimagine how humans can share the world's resources and build sincere communities. Historically, the earth has some unkind history related to the conquering and exploitation of labor in order to build cities. In this exercise, youth will learn how to build a modern city with a mix of cultures and kind and inclusive business practices.

**Youth have the ability to integrate this exercise with the metaverse.**

## Key Components of a Successful City

Since the existence of humans, cities have been built through the ingenuity of human creations. Unfortunately, as more humans populated the planet, the way cities were built wasn't always kind and inclusive. As the next generation of world citizens, you have the unique opportunity to rebuild how humans transact and build. Cities can be built with compassion, collaboration, and contribution. Cities can have transparency in governance, ethics in business practices, and opportunities for all.

As the earth's population increases, the way we share the earth is very important. There is only one earth and lots of new humans entering the planet. As humans learn to share resources effectively and put the planet and its health above instant gratification which is self-serving in nature, the world will become a more

peaceful and equitable place. Cities are built with people; if the people care about the planet and share resources sustainably, then each city in the world will be stronger, thus making a stronger planet. It all starts with you!
